Un arbore B creste in inaltime doar atunci cand:

#### Select one:

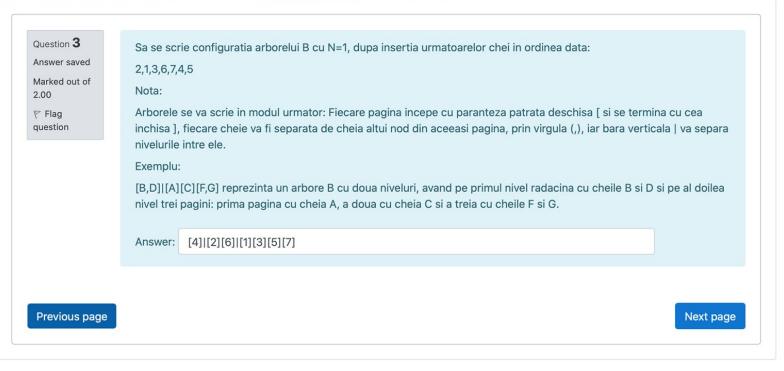

- a. se adauga o noua pagina terminala
- b. se adauga un nou nod intr-o pagina terminala
- o. in niciuna din celelalte variante
- d. are loc o scindare a paginii radacina

P Flag question

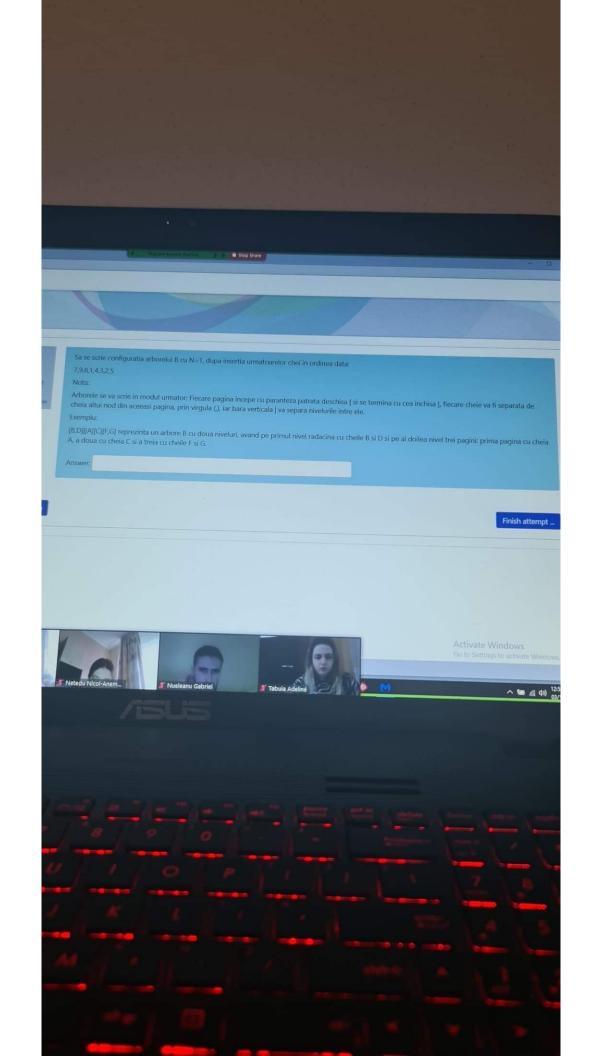

Intr-un arbore B, de ordinul N, o pagina poate avea maxim

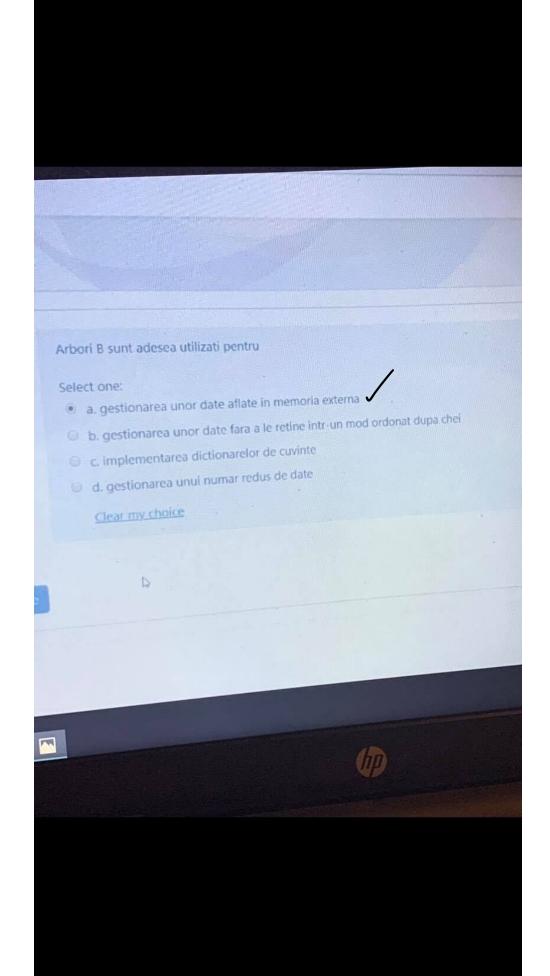

Select one:

- O a. 2N-1 chei
- b. 2N chei
- O c. N chei
- O d. (N-1)/2 chei

Question 3

Answer saved

Marked out of 2.00

P Flag question

Care din urmatorele argumente este esential pentru a alege un arbore B in loc de un arbore AVL pentru indexarea unor baze de date.

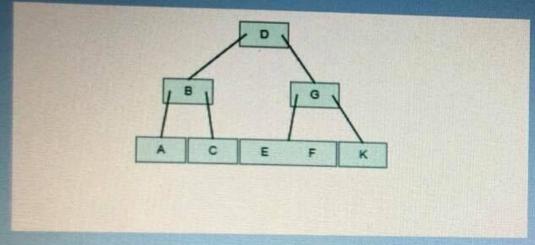

#### Select one:

- a. datele se preiau din memoria externa in blocuri
- O b. bazele de date au un numar mare de inregistrari
- O c. inregistrarile in bazele de date sunt deja sortate dupa o cheie primara
- O d. arborii B necesita mai putina memorie decat arborii AVL

## Sa se scrie configuratia arborelui B cu N=1

dupa suprimarea urmatoarelor chei in ordinea data:

K,B

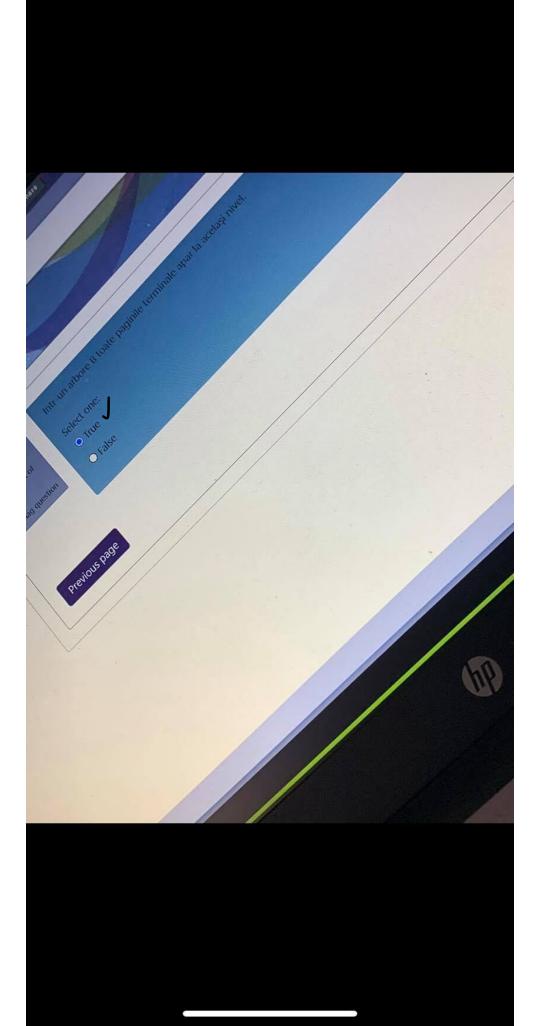

Nota:

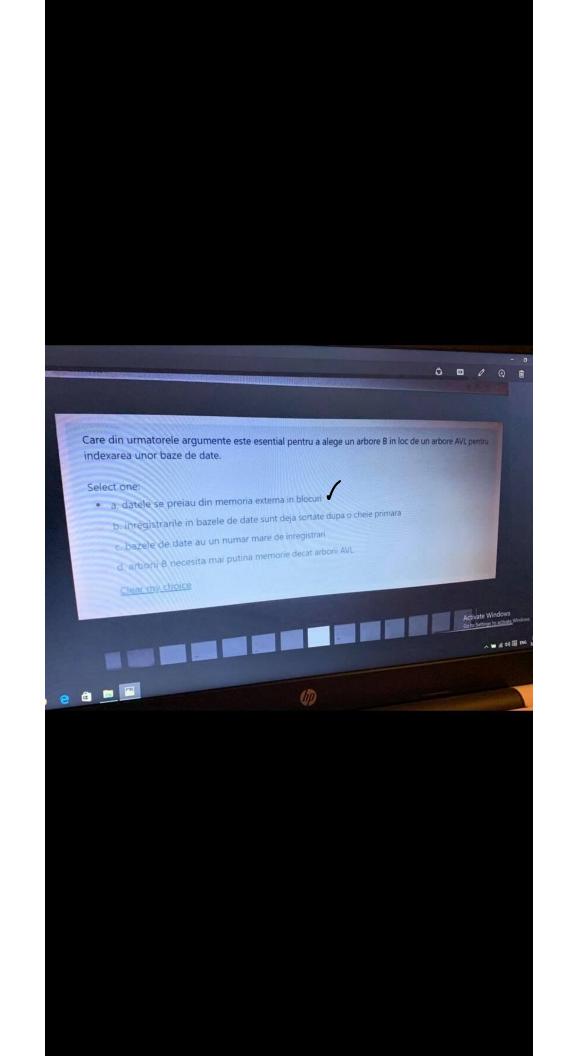

Arborele se va scrie in modul urmator: Fiecare pagina incepe cu paranteza patrata deschisa [ si se termina cu cea inchisa ], fiecare cheie va fi separata de cheia altui nod din aceeasi pagina, prin virgula (,), iar bara verticala | va separa nivelurile intre ele.

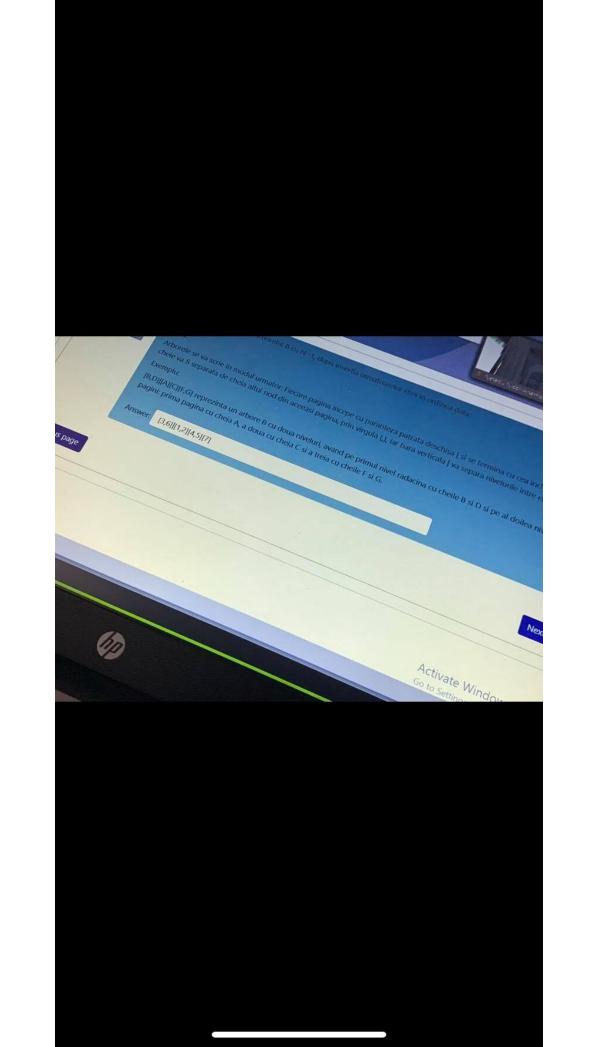

#### Exemplu:

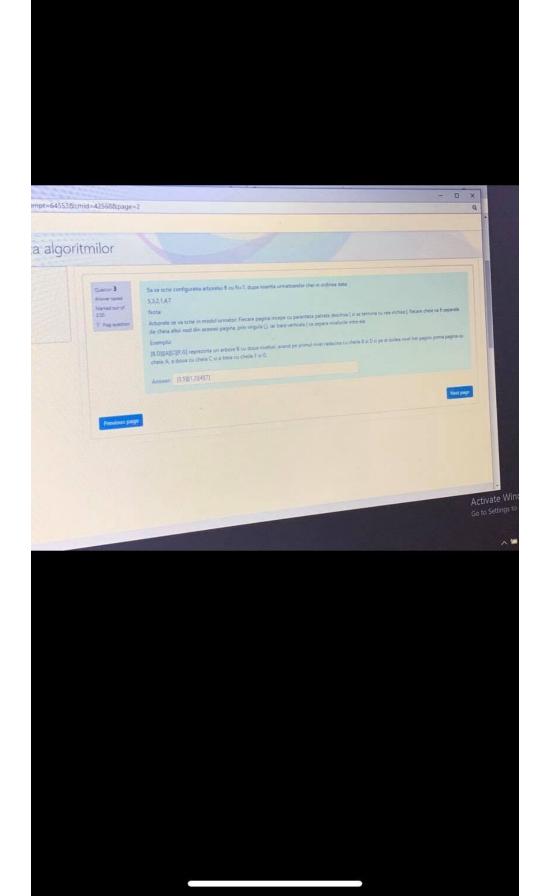

[B,D]|[A][C][F,G] reprezinta un arbore B cu doua niveluri, avand pe primul nivel radacina cu cheile B si D si pe al doilea nivel trei pagini: prima pagina cu cheia A, a doua cu cheia C si a treia cu cheile F si G.

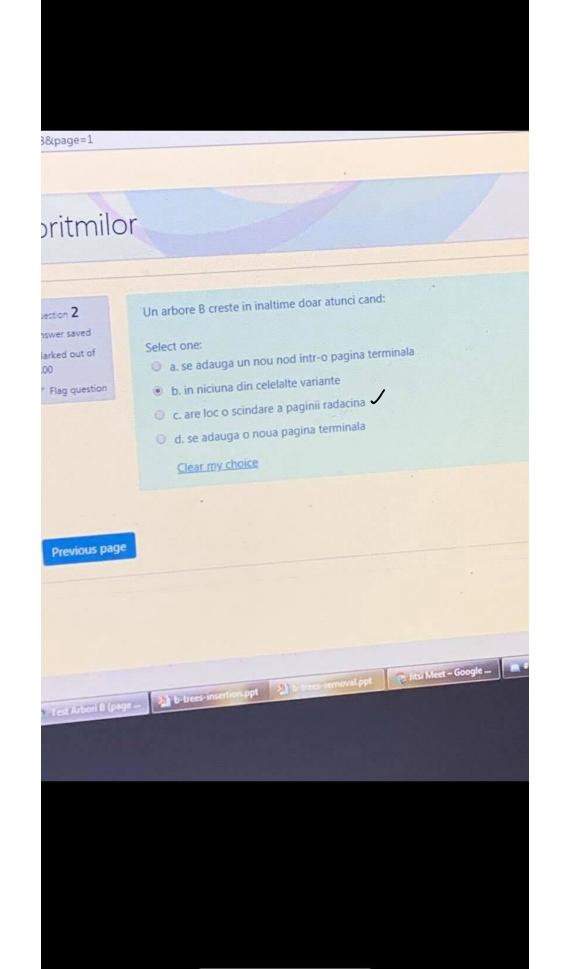

Answer: [D,F]|[A,C][E][G]

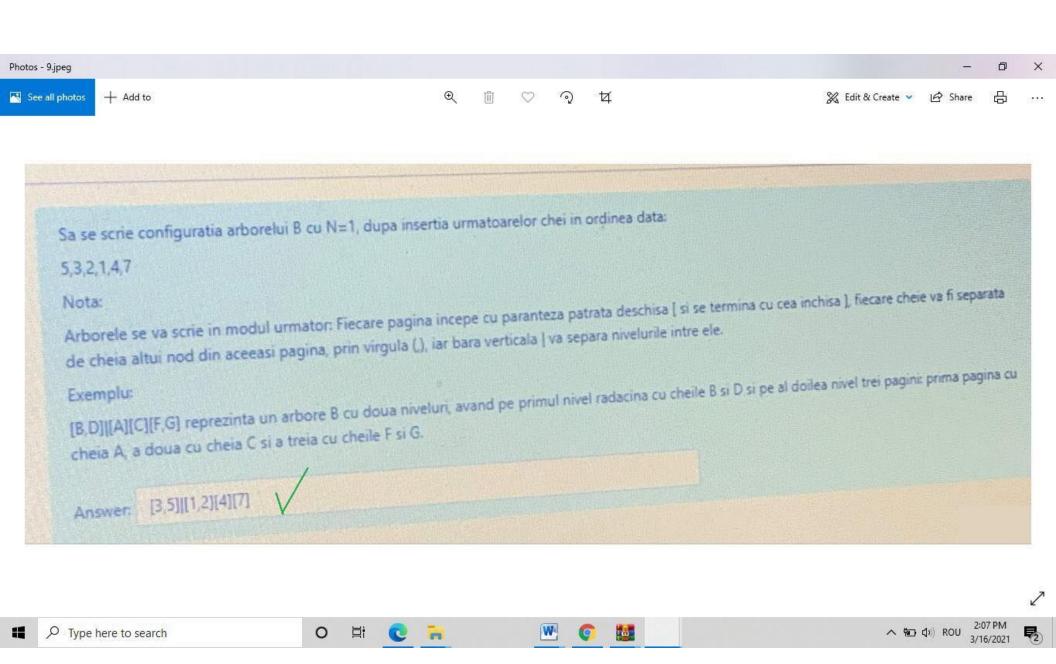

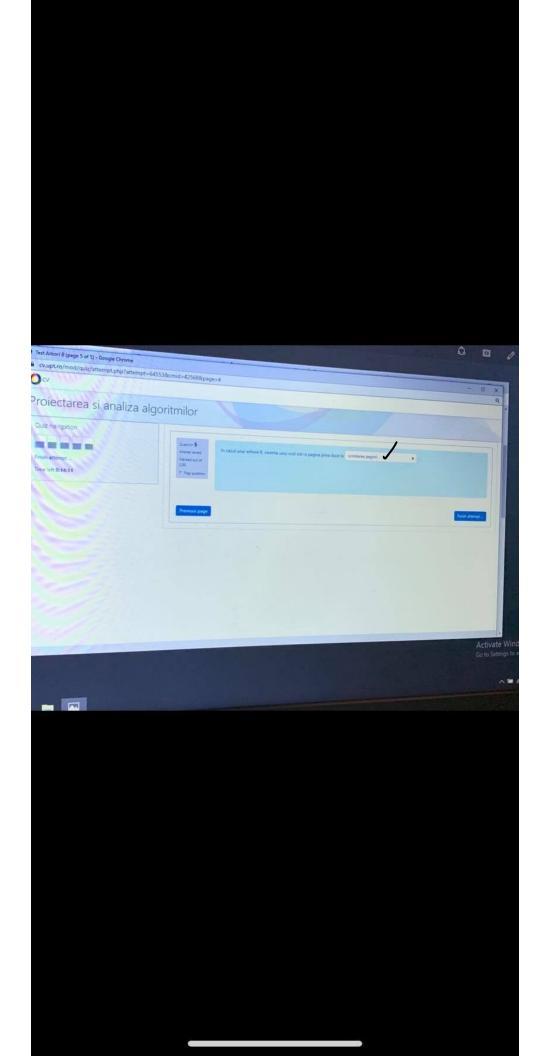

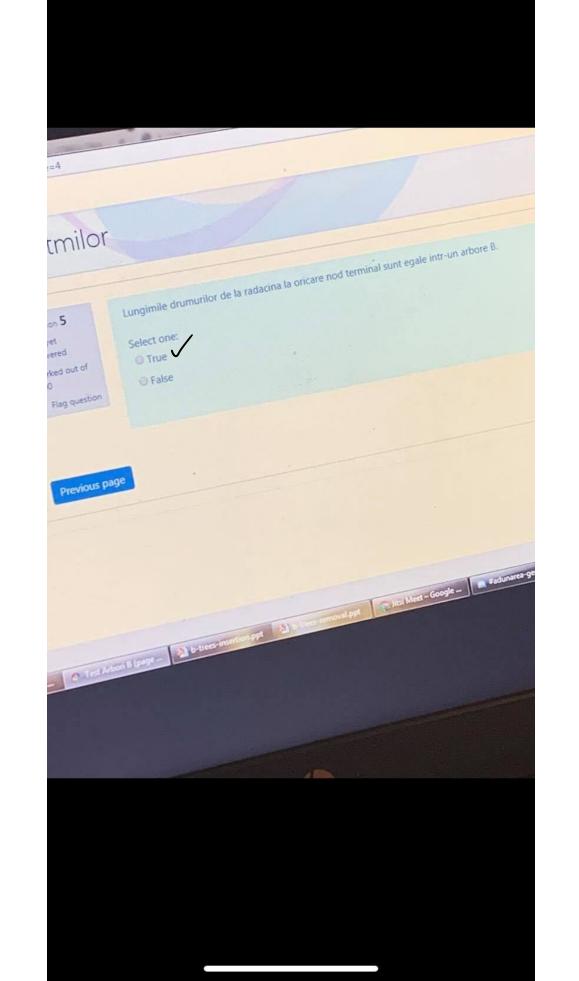

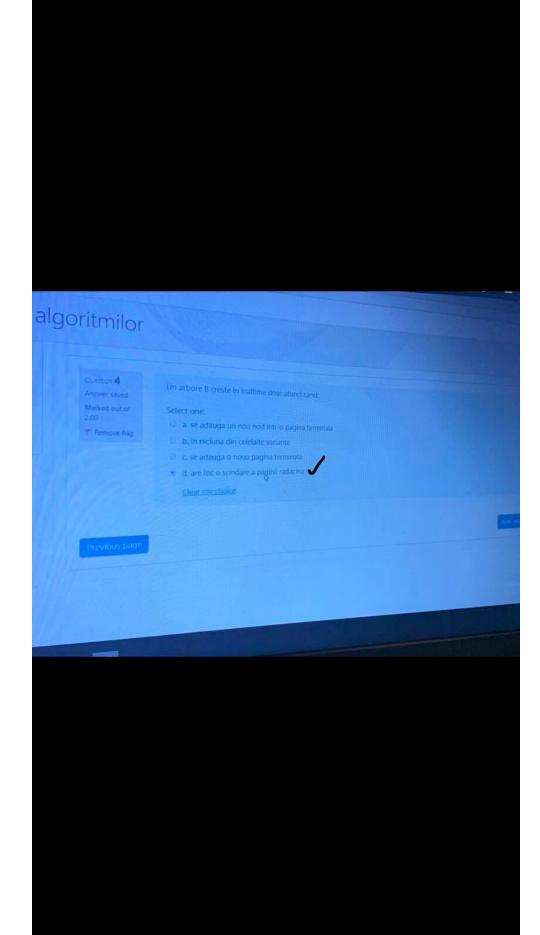

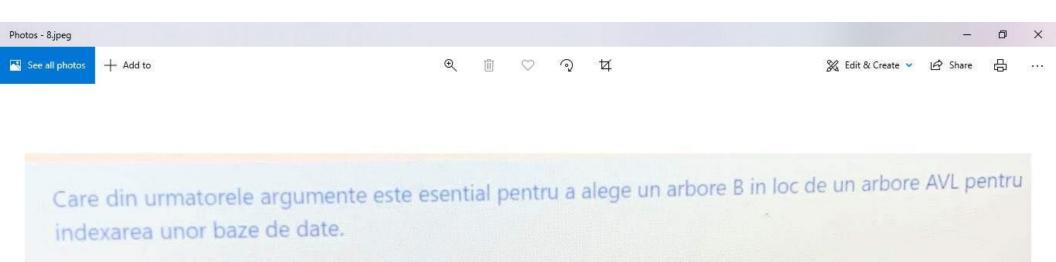

#### Select one:

- a. datele se preiau din memoria externa in blocuri
- b. inregistrarile in bazele de date sunt deja sortate dupa o cheie primara
- c. bazele de date au un numar mare de inregistrari
- d. arborii B necesita mai putina memorie decat arborii AVL
